

Forklift Fork Positioners

Fork Positioner for Forklift - The fork positioner is actually a hydraulic device that allows the person driving to control the lift truck without leaving the seat. They are made out of high quality materials and are meant to be able to withstand the most difficult procedures and work surroundings. Side shifting models have the added ability to be able to laterally position the arms or the entire load so as to facilitate much more exact carrying and placement in a quicker and much more efficient method.

The unique blade pocket design can enable the one operating it to securely swing the unit's forks without any fear of damaging the positioning cylinders. This allows the operator the option to either perform simultaneous or independent fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into fork positioners on existing units.
